

Polyporenic acid C

Cat# C3129

Storage at 2-8°C

Polyporenic acid C shows inhibitory activity against human collagenase. Polyporenic acid C induces apoptosis through the death receptor-mediated apoptotic pathway where the activation of caspase-8 leads to the direct cleavage of execution caspases without the involvement of the mitochondria.

INFORMATION

Chemical Formula : C₃₁H₄₆O₄**CAS No.** : 465-18-9**Molecular Weight** : 482.7**Purity** : ≥98%**Solvent** : Chloroform, Dichloromethane, Ethyl Acetate, DMSO, Acetone
